

DESIGN & TECHNOLOGY INTENT

Our Design & Technology curriculum, which meets the requirements of the National Curriculum, is designed to inspire our children to think creatively, develop skills for problem solving, designing and manufacturing products, so as to better equip them to participate successfully in an increasingly technological world. We teach children skill sets surrounding structures, mechanisms and cooking; encourage them to conduct effective research to inform their own designs and generate their own design criteria. During each topic, children are given opportunities to build on previous skills and to follow the criteria of investigate, practice, design, make and evaluate.
